

BFSI Datasheet

The BFSI industry, due to globalization has been experiencing rapid growth through an effective combination of quantitative and qualitative approaches, while on the other hand cross industry consolidation has transformed it into a highly complex environment where a wide range of financial services are offered under one roof. Tapping the great volume of markets requires creating public awareness of new products and offers.

With the number of customers and the use of newer applications increasing, the industry faces daunting documentation challenges. Creating quality process documents, training materials, marketing collaterals and minimizing litigation issues by avoiding vague terminology are just some of the key issues. Another problem area includes documenting the complete range of risk and contract details of insurance documents.

IDHASOFT, through its affiliated companies, has accompanied the BFSI industry in one of its most exciting and, at the same time, challenging times. Our executive team has designed, developed, and delivered banking, financial services, and insurance (BFSI) solutions to clients both domestically and internationally for over 15 years.

Our team is comprised of a combination of proven successful entrepreneurs, and corporate performers; former CIO, COO, VP and Director level professionals who have honed their skills by delivering results and being held accountable for those results in a corporate setting.

Focused Vertical Offerings
