

Consulting-On-Demand Datasheet

Consulting-On-Demand

Each time a company identifies a consulting need, a flow of requests, paperwork, interviews and purchase orders steal valuable management hours away from senior finance and IT managers. Consulting-On-Demand efficiently streamlines this process by:

Providing Consistency and Capability – Client companies have an assigned relationship manager who controls the continuity of knowledge regarding the client applications, and assures that capable resources familiar with the applications are assigned to the work order at hand. Consulting-On-Demand eliminates the need to review and explain the application and business environment to the new consultant.

Minimizing Costs – In your organization, how many people are involved in a consultant justification and human resource request? Imagine what you could accomplish if six or seven times a year you could avoid the paper chase of consultant approval. Consulting-On-Demand eliminates requests and justifications.

Innovative to the industry, Consulting-On-Demand delivers benefits that meet every company's financial and managerial objectives, as I

- ▶ Defines regular spending patterns Gains access to certified consultants
- ▶ Eliminates candidate search and interview
- ▶ Reduces frequency of legal review
- ▶ Reduces issued purchase orders
- ▶ Eliminates headcount increases
- ▶ Defines hour/rate multiples
- ▶ Increases remote development

Business Intelligence products have evolved into a complex delivery platform. Many companies are seeking a consulting partner that can consistently deliver ...

We are very pleased with the service model we have developed – Consulting-On-Demand – it meets our clients' needs!

*one relationship ...
one contract ...
one purchase order ...
no searching!*

Consulting-On-Demand was created by Idhasoft to help companies eliminate the transactional costs associated with acquiring consultants. It does this by addressing the three shortcomings in the marketplace – consistency, cost and capability.
