

Quickstart Portal Datasheet

Quickstart Portal Solution

What's Included:

The goal of this offering is to provide our customers an accelerated but highly relevant approach to address enterprise productivity and collaboration needs. We provide a solution that includes robust out-of-the-box functionality from the Oracle product set, combined with our best practices and intellectual property from more than 100 Extranet and Intranet deployments to deliver a fully scalable platform that can drive immediate value and Return on Investment (ROI).

Solution Deliverables Include:

- ▶ Installation & Configuration of Development and Production Environments
- ▶ Customized Portal Design (branding) and Taxonomy
- ▶ Technical Integration Brief
- ▶ Tested and Deployed Portal
- ▶ Project Management
 - ▶ Software components including one (1) year of technical support
 - ▶ 4 CPUs of WebCenter Suite
 - Portal/Integration Framework
 - Collaboration Services (Blogs, Wikis, Discussions, Tagging)
 - Business Process/Workflow Improvement Framework
 - Search
 - Usage Analytics
 - ▶ 2 CPUs of Universal Content Management Standard Edition
 - Web and Document Management
 - Workflow

Idhasoft is Different

Idhasoft is a leader in enterprise portal and content management solutions that facilitate access to and management of structured and unstructured information. As a leading integrator of portal, content management, and business process technologies, our solutions work within a SOA environment to help our clients aggregate, control, and personalize their data. Our platform-agnostic approach takes into account our clients' current environment while ensuring flexibility and scalability within the enterprise.

With core competencies in content management, business process analysis, user interaction design, and portal technologies, our team ensures value by creating intuitive interfaces to share complex information and assets.

▶ First Year of Maintenance	▶ Tested and Deployed Portal	▶ Oracle Universal Content Management
▶ 8 Weeks of Professional Services	▶ Project Management	
▶ Pre-Integrated Content Management and Collaboration Services		

Quickstart Portal Datasheet

Quickstart Portal Solution

Idhasoft's QuickStart Portal Solution provides businesses with a framework for communication and collaboration. It is a configurable platform for allowing employee self-service, social networking, and document management, while still controlling access to that information.

The solution leverages Oracle's WebCenter Suite and Idhasoft's experience and best practices from more than 100 portal deployments to surface data from a variety of systems and deliver it to the user in a secure, personalized portal experience. Easily integrated with Universal Content Management and other Fusion Middleware applications such as Business Process Management (BPM) and Business Intelligence (BI), as well as third-party systems, QuickStart Portal helps reduce IT bottlenecks and information time to market.

Empower Collaboration and Improved Productivity

Businesses large and small face a number of system-related challenges and limitations to effectively support employee and partner communication, collaboration, and productivity. How can these organizations encourage secure, productive networking among a wide array of constituents—who take such tools for granted in their personal lives—avoiding the use of unauthorized, uncontrolled, and unsecured tools on the public Internet? And how do they remain confident that HR, IT, Legal, and Marketing personnel—as well as project teams—are sharing the right versions of policies, documents, and other content?

The QuickStart Portal Solution is an ideal fit for organizations concerned about improving efficiency to reduce costs, reducing reliance on IT to do more with fewer people, and encouraging communication and sharing across the enterprise—especially given today's economic conditions. The portal framework provides for a secure, personalized experience to ensure that users are only exposed to the information to which they are entitled, while still encouraging collaboration and social networking, all without requiring IT intervention.

Solution Benefits

- ▶ Enables improvement in business processes
- ▶ Improves information time to market
- ▶ Delivers personalized and segmented content
- ▶ Increases accuracy of information
- ▶ Reduces bottlenecks and reliance on IT
- ▶ Improves collaboration with and among users
- ▶ Provides one-stop self-service for employees and partners

Enabling Efficiency Through Self-Service

Many businesses struggle to quickly roll out new content and functionality to the workforce, involving inefficient business processes that span disparate IT systems and organizational boundaries. As a result they face increased costs, manual and redundant efforts, information inaccuracies, and employee frustration. The QuickStart Portal Solution puts the control in the hands of the employee to self-service his or her own needs, including auto-enrollment to departmental and project teams (and the appropriate access to tools and information), and self-enrollment to affinity groups (bringing employee social networking into the corporate domain). Employees can now turn to the QuickStart Portal for the information they seek, whether it be task-oriented (e.g., project calendar, tasks, documentation) or free-form (e.g., wikis, blogs, discussions), all in a secure setting.
