- ▶ Total buy-out model

### Introduction

As a healthcare service provider today you face an unprecedented challenge – balancing high-quality patient services with the evolving healthcare standards, increased government regulations, emerging e-business trends, rising patient expectations and a demand for lower healthcare costs.

IdhaSoft brings you iHMiS® – a unique web-based solution that addresses the needs of administrative, clinical and support service functions of your hospital. Our solution is customized to suit your requirements regardless of whether your facility is multi-sited or requires integration with e-health systems. This solution springs out

of a thorough understanding of the healthcare industry. Our solution addresses the needs of the hospital management system allowing you to focus on your critical business. iHMiS® works in unison providing access to SAP's best business practices and process along with SAP back office applications.

SAP for Healthcare is a portfolio of state-of-the-art software solutions tailored to the specific standards, processes, and challenges of the healthcare industry. They are built to fit the way you operate. And they comprise the industry's leading and most

comprehensive set of solutions, helping healthcare organizations gain enterprise-wide visibility for better decision making in critical areas. SAP for Healthcare solutions can help your organization improve its operational efficiency, mitigate risk, and control costs, while enabling innovative business models and patient services.

Supported by the SAP NetWeaver® platform, a powerful integration and application platform, these solutions deliver rich functionality and efficiency-enhancing tools throughout your organization. And they help you adopt the best practices SAP has developed in over 15 years of working with major healthcare providers and industry leaders from around the world.

### iHMiS®

iHMiS® is a futuristic web-based hospital management solution developed by Altus Systems Pvt. Ltd. A subsidiary of Idhasoft Limited With iHMiS® you can dispense cost-effective healthcare. As iHMiS® directly addresses the concerns of hospitals and physicians, it will give you a competitive edge by making your core business more efficient.

### Features of iHMiS®:

iHMiS® has a modular approach to cater to the requirements of the various departments of a hospital. You can choose only those modules that are applicable to your concerns or choose an end-to-end enterprise-wide implementation. Some of the modules that comprise the iHMiS® solutions along with proposed SAP Modules include:

# idha Hospital Management information Systems

# idhasoft

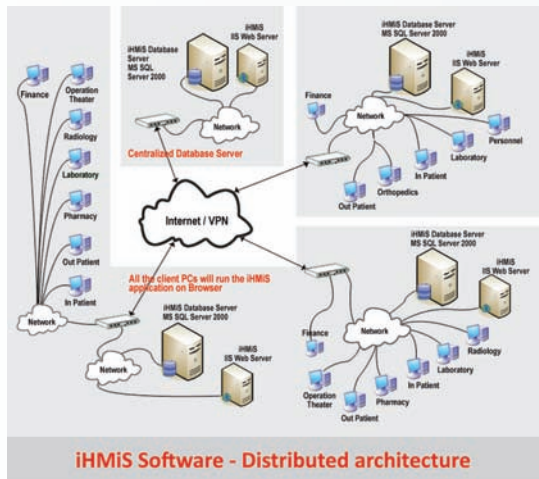

## Implementation Methodology

The implementation methodology of Idhasoft combines an understanding of the business functions, reporting and technology goals of the company, and working out the solution in manageable segments. Each of the modules is created with the above aim. The following is the methodology workflow.

Business model prototypes are developed and test runs are conducted before the go-live stage. This will help map the user expectations with the actual solution.

## Technology & Architecture

### Workstations/Client PC :

Any windows PC with Internet Explorer 6.0 or later also supports THIN CLIENT PC.
